

STRENGTHEN SUPPLY CHAIN FOR PROFIT GROWTH

INVOICENXT IS AN ENTERPRISE SAAS WITH EMBEDDED
FINANCE

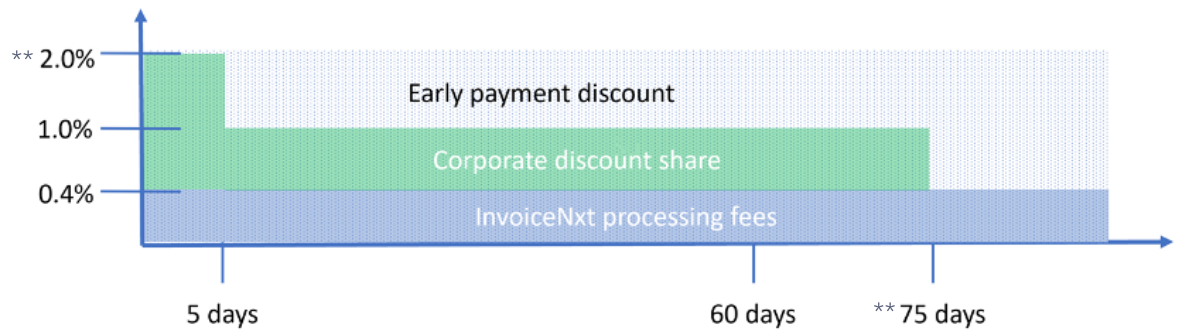

Becoming the best paymaster - effortlessly - InvoiceNxt allows suppliers to request invoice payments whenever needed with a single click. Using reliable and proven algorithms, InvoiceNxt offers early payment against a discount as soon as the invoice is approved. Without any human intervention, early payment requests are processed and payments done.

Building a strong supply chain – adding profits to the bottom line.

SMART PAYMENT TERMS - MAXIMISING CASH FLOW AND ROI CAPITAL

InvoiceNxt allows corporate buyers to benefit from smart-payment terms by *dynamically adjusting their payment terms based on their cash availability and the working capital needs of their suppliers*. For the corporate buyer, InvoiceNxt acts like an autonomous AI-backed payment service provider, extending payment terms if needed, and automatically optimising the corporate buyer's cash flow and ROI on capital.

MONETISING EXISTING ERP DATA - TRANSPARENTLY FOR BUSINESS USERS

For corporate finance and procurement departments, InvoiceNxt is completely transparent – nothing changes. Accessing only a very small subset of already existing ERP data, InvoiceNxt does all the rest.

ALLOWING SUPPLIERS TRANSPARENT ACCESS TO VITAL INFORMATION

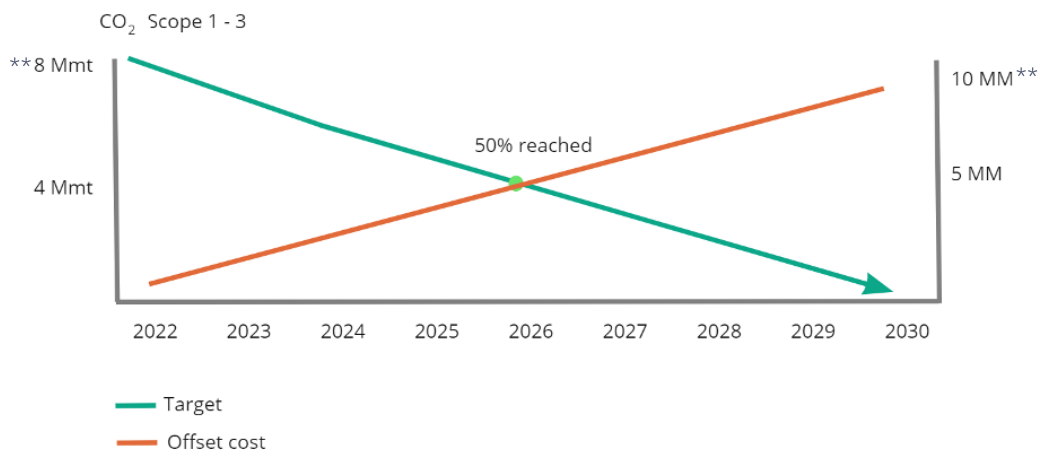

Directly in InvoiceNxt, suppliers track the status of entire transactions, from purchase orders, deliveries, and invoice processing, to payments. The simple-to-use front end of InvoiceNxt is specially designed to meet the needs of suppliers and provides answers to vital questions such as expected payment amounts and dates.

CASH-BASED INCENTIVISATION FOR ESG ALIGNMENT - AT ZERO COSTS TO CORPORATES

With InvoiceNxt, corporate buyers communicate their environmental, social and governance (ESG) standards and validate the alignment of the entire supply chain. InvoiceNxt automates a cash-based incentivisation for suppliers, which comes at zero cost for the corporate buyer.

EMBEDDED-OFFSETTING - BASED ON SCIENCE BASED NET-ZERO INITIATIVES

InvoiceNxt translates corporate buyers' net-zero targets for Green House Gases (GHG) into science-based initiatives for entire supply chains (scope 3). Suppliers provide emission-relevant data ("primary data"), which is used to determine "true costs" and automate emitter-specific embedded offsetting.

DIGITALISING THE SUPPLY CHAIN - ELIMINATING MANUAL PROCESSES

Suppliers can use InvoiceNxt to create “perfect” electronic invoices, always compliant with the respective fiscal regulations. Electronic invoices raised by suppliers in InvoiceNxt with only a few clicks enable straight-through processing (“STP”), eliminating costly and error-prone manual activities of the AP department of the corporate buyer.

ONLY OUTCOME BASED COSTS

InvoiceNxt does not charge any upfront- or recurring fees, every cost is purely outcome-based. Only if InvoiceNxt is successful in onboarding suppliers, improving data quality, eliminating manual tasks and facilitating early payments, fractions of the additional profits will be invoiced.

ERP AGNOSTIC - NO LOCAL FOOTPRINT REQUIRED

InvoiceNxt is ERP agnostic, everything from supplier onboarding and creation of “perfect” electronic invoices to early payment processing is provided by InvoiceNxt as a cloud service.

N:XT INTERFACE FOR SAP (C)

For corporates using SAP ECC or S/4HANA, InvoiceNxt comes with an SAP-certified interface, which can be installed and customised within hours.
